

Founded on tradition

The Hueck brothers laid the foundation stone for the family company in 1814, when they established a „factory in various buttons and trading in iron, steel and brass goods“. In 1864 the company’s name was changed to „Eduard Hueck“. At the beginning of the 20th century the company’s management at the time made early use of the possibilities offered by the new material aluminium. A first extrusion press went into operation as early as 1908.

Constant innovations and over one hundred years’ experience in processing aluminium have established the company’s good international reputation. Today, Eduard Hueck GmbH & Co. KG is an expanding, globally active company.

Sales:

€ 200 Millionen p.a. (consolidated)

Employees:

700

Products:

- Aluminium systems for the building industry
- Industrial profiles for all branches

Satisfied customers

Quality and customer orientation

The high quality of our products is achieved through great manufacturing depth, which we display from the manufacture of the forged aluminium bars in our own foundry through the latest extrusion presses to our own toolmaking. This advantage of being able to offer everything under the one roof creates for us all the preconditions for being able to react quickly to customer requirements.

The flat organisational structure, which enables great flexibility, short sequences and quick decision-making, is a further plus in our ability to react rapidly to customers' needs. A sales organisation that is even more oriented to the customers' processes creates the precondition for close customer care on site. In addition, it provides enough space to take account of specific regional or national circumstances during support by the sales office and field sales.

Through the quick actions and the use of synergies, as well as the bringing together of expertise in the areas of development and logistics, our customers now have an excellent product portfolio with contemporary and up-to-date technical alternatives.

Consistently oriented to the future requirements of the market for aluminium system profiles, Hueck is therefore a „multi-specialist“ for architects and planners, as well as for metal window and façade manufacturers, for practically every problem area in building with aluminium profiles. However, at the same time we see ourselves as a competent partner who can offer everything under the one roof:

Windows and doors made of aluminium profile systems. From an intelligent modular system for optimised warehousing, rational planning, time-saving and low-cost processing.

Safety constructions for fire and smoke control. Always in accordance with the state of the art and with the appropriate applicable statutory regulations in Europe.

A wide range of variants in façade systems. Identical profile geometry for mullion and transom, structural glazing design, suitable for passive houses, efficiently prefabricated unitized constructions. And including the individual preparation of projects by special project teams. Quality from the start. And in the future.
